SPECIAL SHAPED BRICKS

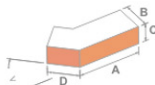

Standard Special Shapes

An angled bay or wall can add value and character to any house or building, by using standard special shape bricks these details can be built quickly and accurately using the main brick type or contrasting bricks to provide a feature detail.

External Angle (Dogleg)

B.S.ref: A.N.2.5 Detailed Above

Left Hand Shown
Size in mm

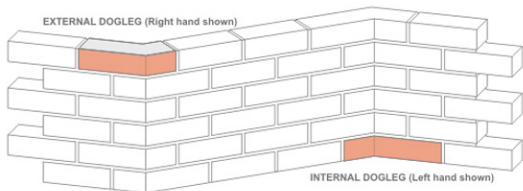

A	215
B	102
C	65
D	102
∠	45 degrees

Used as an alternative to the squint brick (A.N.1) this external angle dogleg brick gives a better looking bonding detail at angled corners.

Accurate brick sizes are crucial at short return corners. External angle doglegs can be made to any standard or non-standard angle.

If you have a brick with a textured face then it may be advisable to have left and right hand bricks made, smooth face monotone bricks can be used on either hand if required.

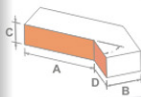

PREMIER DOGLEG BRICKS CAN BE MADE TO ANY REQUIRED ANGLE OR SIZE

The Internal Angle dogleg provides a better looking and faster alternative to using cut standard bricks with a mortar joint.

Stretcher bond is easily obtained without using cuts placed next to the special and true vertical corners can be easily achieved due to the regular shape of the brick.

If you have a brick with a textured face then it may be advisable to have left and right hand bricks made, smooth face monotone bricks can be used on either hand if required.
